Harbinger Floors Certified NSF/ANSI 332 Platinum

Bay Resource Group is committed to product transparency. In our continuous effort to provide an environmentally responsible product, we contracted SCS Global Services, a third-party organization to inspect, validate and verify Harbinger in accordance to NSF/ANSI 332 standard measures of six key areas: product design, manufacturing, long-term value, corporate governance, end-of-life management and innovation.

"We believe NSF/ANSI 332 will promote the greater use of sustainability practices in the manufacture of resilient flooring while also bringing more transparency and clarity to the sustainability process," says Dean Thompson, president, Resilient Floor Covering Institute (RFCI), which was involved in the development of the standard.¹

The overall purpose of this Standard is a thorough communication of information that is verifiable, accurate, and not misleading about environmental and social aspects associated with the production and use of resilient floor coverings.²

Certification is based on points total to achieve Conformant (basic level), Silver (second tier), Gold (third tier) or Platinum level. Harbinger has been awarded NSF/ANSI 332 Platinum level certification, the highest level of performance recognized.

"Our goal has always been to make a product as environmentally responsible, while delivering performance and durability. Quality has never been sacrificed for cost. I am proud to say we have been about to achieve these goals throughout our history." Ed Van Oene, President, Bay Resource Group
